

# kat3rcoin – The case for going nuts on the decentralized web

There's a long road ahead of us, as a new virtual future slowly becomes non-fiction, but it may not be as long as many think. We at OpenSenf believe that carving out the foundations of this world may be one of the most important ongoing technical developments of the next decade, and beyond. Today we bring you one step closer to this brave new world with the release of our innovative recently researched and developed centralized ledger based platform, OpenSenf.

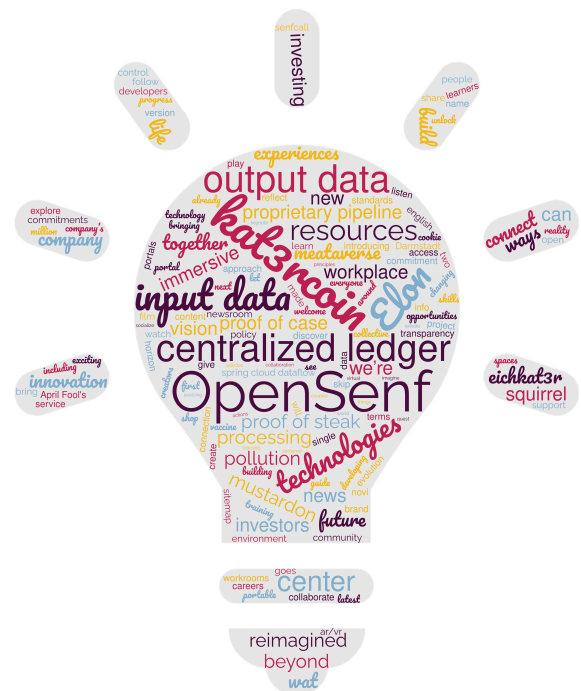

# Vision

We at OpenSens believe in expanding our operation beyond seasoning paste based videoconferencing platforms (see [Senscall.de](http://Senscall.de) for reference) and want to enable you and billions of other people to decompose your hidden assets and develop new business models.

To reach this goal, we analyzed currently established Altcoins such as Ethereum and the Metaverse to understand the lurking pain points and how to revise these early/prototype concepts. With all this gathered knowledge we started our incubator and developed a new and innovative crypto system founded on a case-backed currency.

We are aware that this approach has its deficits. Therefore we are actively working with our close network of partners to offset the environmental impacts our system lacks.

From time to time we will release information about upcoming phases. There are a number of internal phases which are not listed here due to confidentiality and commercial reasons. What we can say is that we are heavily committed to expanding the purposes behind seNFTs on OpenSenf and ultimately increasing demand and value for those seNFTs.

# Timeline

Phase 1	Environmental compensation – we generate baseline pollution assets to compensate for our use of CO <sub>2</sub> -limited currency  Development of algorithms and secure ledger verification technology  Initial distribution of kat3rcoins to investors and early backers
Phase 2	Release of the OpenSenf website and initial set of seNFTs  General kat3rcoin availability in exchange for proof-of-case
Phase 3 and beyond	Increasing demand for and value of seNFTs  Matching our environmental impact as we grow – steadily increasing investment in fossil-fuel based technologies

## Discover your journey today!

Join us on [OpenSenf.de](https://OpenSenf.de) and start investing your kat3rcoins. If you do not yet have kat3rcoin assets, begin by providing your proof-of-case to our single source of trust (eichkat3r).
